Abstract (en)

A device (1) for packing packets (3), particularly of cigarettes, in groups (2), which device (1) features at least one packing conveyor element (6) for successively receiving preformed groups (2) of packets (3) from a conveyor device (4) together with respective packing elements (15) from a respective feed device (13); and an output conveyor device (7) for the packed groups (2) of packets (3); the packing conveyor element (6) being so designed as to cooperate selectively with a respective first folding device (43) for forming a cartoning device (45), and with a respective second folding device (44) for forming a wrapping device (46). <IMAGE>
