Abstract (en)

[origin: EP0529416A1] In a lock cylinder (10), it is proposed that the web profile part (24) should project beyond the key-entry end (28) of the cylinder profile part (22) by a length which corresponds approximately to the length of the simultaneously present frustoconical projection (36a, 36b) of the lock-cylinder core (14) beyond the end face (28) of the cylinder profile part (22). The projection of the web profile part (24) is provided with bevels (38b, 38c, 38d). Room for a safety device (48) against drilling open is thereby provided in the web profile part (24), without the nominal length of the lock cylinder being extended, without the visual appearance of the built-in lock cylinder being impaired, and without the possibilities of attack by a demolition tool being improved. <IMAGE>
