Abstract (en)

Disclosed is a light-sensitive silver halide color photographic material having photographic constituent layers including a blue-sensitive silver halide emulsion layer, a green-sensitive silver halide emulsion layer and a red-sensitive silver halide emulsion layer on a support, characterized in that at least one green-sensitive silver halide emulsion layer contains at least one colored magenta coupler represented by the following formula (CM - I), and at least one photographic constituent layer contains at least one vinyl sulfone type hardener, <CHEM> wherein R1 represents a substituent; R2 represents an acylamino group, a sulfonamide group, an imide group, a carbamoyl group, a sulfamoyl group, an alkoxy group, an alkoxycarbonyl group or an alkoxycarbonylamino group; R3 represents a halogen atom or an alkoxy group; m represents an integer of 0 to 5; and n represents an integer of 0 to 4.
