Abstract (en)

[origin: EP0530101A1] After having laid the ribbed steel sheets (2) onto the purlins (1) of the frame, and placed the layer of insulation (3) on top, a flexible tape or a row of flexible small plates (4) for the connection of covering are laid on top of this layer of insulation, in line with each purlin, and then washers or rigid iron strips (5) are placed on top. Self-tapping screws or the like (6) are then inserted through the washers or iron strips; after having passed through the tape or the flexible small plates, the insulating layer and the ribbed steel sheet, these screws are screwed into the purlins (1). Finally, the watertight covering is fitted while being adhesively bonded or welded on the tapes or the flexible small plates (4). Application to the roofing of industrial buildings. <IMAGE>
