Abstract (en)

[origin: EP0530123A1] Accuracy selector for a switch drive stick, comprising a control lever (10) pivotally mounted for back and forward movement in a frame (11), which acts by one end (13) on switches (14), including a switch driving organ consisting in a piece (17) coaxially arranged to the end, with a limited axial and rotary movement, with respect to said control lever, the piece having two differentiated polygonal portions coaxially linked, one of them of quadrangular section loosely housed in a quadrangular hole, of a selecting piece (15) rotatably mounted, with a driving appendage (15a) which admits two stable positions, angularly offset, and a second portion outside the hole, of octagonal and irregular section, with four faces of a larger surface alternating with four other smaller faces. At each of the two stable positions, of the selecting piece four equal faces remain directly opposite and close to push buttons of the switches. <IMAGE>
