Abstract (en)  
[origin: EP0530457A1] A cassette for flexible sheets (2) has a cuboid housing (14) with a removable cover, which housing possesses on mutually opposite sides (6; 7) orifices (10; 11) for the transport of the sheets (2). The orifices (10; 11) can be closed by closing means (15; 16) when the cassette is located outside a service machine. In the housing (14) there are two pressure plates (4; 5) which press the sheets (2) towards the orifices (10; 11) in two stacks (12; 13) and which are arranged on rails (3) so as to be displaceable independently of one another in parallel between the two orifices (10; 11). Only the sum of the heights of the two stacks (12; 13) is limited, since the displaceable pressure plates (4, 5) are adjusted correspondingly on the rails (3). The cassette can therefore be filled to an optimum degree. <IMAGE>
