Abstract (en)

1. A method for processing a silver halide color photographic light-sensitive material is disclosed. The method comprises the steps of exposing the material, developing the exposed material, processing the developed material with a processing solution having a fixing ability, and stabilizing the processed material with a stabilizer, wherein the concentration of ammonium ions in said processing solution is not more than 50 mol% of the total cations, and said stabilizer contains in an amount of 0.05 to 20g per litre at least one compound selected from those represented by the following Formula (F): <CHEM> d
