Abstract (en)

In an aerosol spray comprising a spray container (1) containing a spraying product (V2), a spray head (2) having a valve (5) which opens by pressing the spray head and a spray nozzle (7), air purified by passing through a filter device is used as a propellant (V1) for discharging the spraying product. The propellant air (V1) may be purified by at least one dust-removing filter (15a, 15b), chemical filter (15c) and germ-removing filter (15d). The propellant (V1) of the purified air is safe to man and has no danger of causing environmental pollution and disruption. <IMAGE>
