Abstract (en)
[origin: WO9118824A2] The invention relates to an improved process for filling and sealing containers, preferably bottles with a liquid, in which filled containers are sealed with a sealing element in a filling device with deformation of the sealing element or/and the container and with formation of a sealing pressure seat between the container and the sealing element. The invention also relates to a device for carrying out the process. The process according to the invention is characterized in that the sealing element is subjected to a slight sealing press pressure to form a sealing pressure seat in a first sealing stage and the final sealing press pressure is produced in a second sealing phase.
