Abstract (en)

[origin: FR2664687A1] The invention relates to a safety device for an automatic continuous-fire weapon, comprising a rotary drum (2) driven by an external motor in order to drive a breech in a reciprocating movement. It comprises means (14) for blocking the rotation of the drum at each cycle, and control means for retracting the blocking means in the event of recoil of the weapon, the said control means being designed to act on the blocking means over a predetermined travel of the recoil, irrespective of the starting position of the recoil. <IMAGE>
