Abstract (en)

The invention relates to a composite tooth for earthmovers formed from a crown holder (10) having an end sung (13) with at least two diverging sloped shoulders on its sides, from a crown (11) with a cavity which has a bottom of a complimentary shape to that of the sung end to the sloped shoulders of the crown holder so that they can connect and from an elastic assembly key (12) which fits in oval holes transversally formed in the crown and crown holder. <IMAGE>
