Abstract (en)

[origin: EP0531685A1] Carbonate-containing mineral fillers, pigments or similar materials are described which are characterised in that they have
a) a rhombohedral or substantially circular particle shape, b) a steepness factor from 1.1 to 1.4, c) a ratio $R = \frac{\text{DIVIDED \% of the particles} < 0.2 \mu\text{m}}{\text{DIVIDED \% of the particles} < 0.2 \mu\text{m} = 8 \text{ to } 19}$ and d) a mean statistical particle diameter of 0.4 - 1.5 μm . These materials can be used in the paper industry both as paper filler and as coating pigment. <IMAGE>
