Abstract (en)

[origin: JPH05220933A] PURPOSE: To provide a device for changing printing plates which is simple in structure and small in volume and capable of combining it with semi- and full-automatic printing plate supply units as a standardized component without limiting the access to a printing unit. CONSTITUTION: This device is a printing plate changing unit capable of inserting a bent rear end 3 of a printing plate 2 to a fastening device 31 of a printing cylinder 14 using a roller 1. This device is simple in structure and small in dimensions and the access to the printing unit shall be limited as little as possible. A roller 1 is supported by a bearing to guides 5... at its end and shifted by adjusting members 8... coupled tightly with its machine frame. The roller 1 is pressed to the rear end 3 of the printing plate 2 in the direction of insertion. In addition, the roller 1 can be separated from its bearing by hands without using tools.
