Abstract (en)
[origin: EP0531898A1] A guide part (24) can be latched and unlatched by a slide piece (35) on the edge (R) of a tub or running profile (19) of a shower tray or bathtub partition (11) having displaceable door elements (20, 20_). The slide piece is integral with or functionally connected to the door element handle (30). Said handle (30) is vertically displaceable to a limited extent and has, for example, two bars (41, 42) which are connected to a coupling bush (40) approximately half way up the door element (20, 20_). Said coupling bush guides and fastens the central ends (43, 44) of the bars which are fixed and, if appropriate, secured by a retainer in at least two positions. The coupling bush (40), as a nut with opposite threads, can move the two ends (43, 44) of the bars towards or away from one another. The slide piece (35) has a smooth roller (36) which, in the latching position, rests with sliding movement against the outside of the running profile (19) and, on the other side of the edge (R), is opposite a slide roller (26) on the lower part of the door element. The handle (30) can be tubular and can be guided by inner ribs (33) on a front strip profile (28).
