Abstract (en)

A film-type electrical resistor (10), comprises a chip (11) formed of a substance that is electrically insulating and has substantial thermal conductivity, a resistive film (12) applied to one side of the chip (11), leads (14, 15) connected to the film (12) on the one side of the chip (11), and a molded body (13) substantially fully encapsulating the chip (11), the film (12), and the inner ends (43) of the leads (14, 15). The molded body (13) is formed of a high thermal-conductivity thermosetting synthetic resin, and the molded body (13) has a bolthole (16) therethrough for clamping of the resistor (10) to a chassis or heatsink (19). <IMAGE>
