Abstract (en)
A guide track (20) for receiving a guide bracket (26) of a sliding door (1), the guide track (20) including a longitudinal opening (22) having a width adapted to accommodate and guide a guide bracket (26), during use, and an internal channel (24) within the track (20) communicating with the longitudinal opening (22) along the length of the track (20), wherein the width of the internal channel (24) is greater than the width of the longitudinal opening (22). This arrangement enables debris falling into the guide track to be swept along the internal channel (24) without blocking the track (20) and causing malfunction of the sliding doors. <IMAGE>
