Abstract (en)

[origin: EP0532390A1] The present invention relates to an automatic dispenser for labels ensuring the selective detachment of labels from a continuous strip. It consists of a compact module comprising at least three parts which are articulated with respect to one another, including an upper flap 8, a principal guide part 6 and a lower guide part 4, which interact mutually so as to form the said guide path, and the latter has its axis for entry of the strip offset angularly by twisting of the axis for exit of the labels. <??>These parts 4, 6, 8 carry a strip-guide path, a cutting means, means for intermittent driving of the strip, means for detecting the strip and the labels, means for controlling the said drive means and the said cutting means, and means for ejecting each detached label. <IMAGE>
