Abstract (en)
[origin: EP0532908A1] A shuttering element (1) for joints in concrete constructions is described, having two sheet-like shuttering parts (2a, 2b) and lying in between and fastened on the shuttering parts (2a, 2b), a securing means (3) for a joint strip (water bar) (7). In order to be able to handle such a shuttering element (1) for joints better and more easily and for production to be simple, it is proposed to provide a cage-like bow construction (3) as the securing means. The cage-like bow construction (3) has two legs (3a, 3b) which extend transversely with respect to the shuttering parts (2a, 2b) and are connected to each other. In each case one of the legs (3a, 3b) is connected to in each case one of the shuttering parts (2a, 2b).
