Abstract (en)

The capped electric lamp has a cap (3) comprising a metal shell part (5), an insulator part (7) and electric contacts (4). A metal ring (10) having protruding tongues (11) is secured in the shell part (5), the tongues (11) clampingly pressing against the insulator part (7). The insulator part (7) may comprise a first and a second body (16,17) clamping a transverse portion (20) of an electric contact (4) in between them. The insulator part (7) is rigidly secured in the shell part (5). <IMAGE>
