Abstract (en)

[origin: EP0533556A1] The invention relates to a closure device of the type comprising, on the one hand, at least one rod (15A, 15B), which, mounted so as to slide under the control of a cam (16) locked in rotation on a control member (18) available to the user, carries on the side at least one bolt (19, 19%), and, on the other hand, at least one catch (20), fitted to the corresponding frame, and with which the bolt (19, 19%) is adapted to interact by engaging. According to the invention, for the same catch (20), the rod (15A, 15B) comprises, evenly spaced from each other over its height, two discrete bolts (19, 19%), one being active for a first direction of raising of the leaf in question, and the other being active for a second direction of raising of this leaf. Application, in particular, to cabinets, in particular for electrical appliances. <IMAGE>
