Abstract (en)  
[origin: US5628730A] A drug delivery apparatus and method for delivering a drug locally to internal body tissue. The invention contemplates positioning a drug delivery device in a body passageway or within body tissue and then selectively introducing a selected drug so that it is transported across a drug transport wall of the device for direct contact with the passageway wall or body tissue. A further aspect of the present invention involves treating a dilated vessel in the area of a stenotic lesion with a fixative or other drug to render the vessel biologically inert and to form a biological stent or prevent restenosis using specifically selected drugs. A still further aspect of the present invention involves treating a tumor or local or regional tissue mass with antitumor sensitizing agents, biological modifiers, antibiotics or other types of drugs by delivery of the drug to the tumor or tissue area directly or through the passageway wall.

Abstract (fr)  
Appareil d'acheminement de médicament et procédé d'acheminement d'un médicament localement à des tissus corporels internes. L'invention consiste à positionner un dispositif d'acheminement de médicament dans un passage corporel ou à l'intérieur de tissus corporels, et ensuite à introduire sélectivement un médicament sélectionné de manière qu'il est transporté à travers une paroi de transport de médicament du dispositif pour permettre un contact direct avec la paroi du passage ou les tissus corporels.
