Abstract (en)  
The present invention relates to a liquid soap supplying device (A1) comprising a tank (1) for storing liquid soap, a discharging nozzle (6) communicating with the tank (1) through a pipe (3), a liquid soap supplying means for supplying liquid soap in the tank (1) to the discharging nozzle (6), an air supplying means communicated with the discharging nozzle (6) through a pipe (4) and a mixing chamber for liquid soap and air arranged in the discharging port of the discharging nozzle (6). A pressurized device (2) can be in communication with the air accumulation part at an inner upper part in the tank (1), an air feeding pipe is led out of the air accumulation part, and the liquid soap and air in the tank (1) are fed to the discharging nozzle under operation of the pressurizing device (2), thereby providing a supplying system capable of discharging bubbled liquid soap from a plurality of discharging nozzles (6) with only one supplying source in a cost saving manner. <IMAGE>
