Abstract (en)

[origin: EP0534229A1] The invention relates to a method for operating an automatic winding machine with a cop- and tube-transport system having a plurality of transport loops. The object of the invention is to propose a method which also makes it possible to use the transport system for the batch change. This object is achieved, according to the invention, in that in the event of the run-out of a batch, when no new cops are fed any longer to the winding machine, the wound-off tubes in the transport system are conveyed to the winding machine in closed circuit. <IMAGE>
