Abstract (en)

[origin: EP0534475A1] The cable loop insert (1) for the interconnection of prefabricated concrete compound units, in particular for the end-face reinforcing interconnection of concrete wall elements, essentially comprises a flexurally elastic cable loop (2) and an insert element (11) serving as a hollow shaped core. During production of the prefabricated concrete compound units, this insert element (11) receives a continuous head portion (3), angled off in the direction of the shuttering, of the cable loop (2) and encloses the same in a sealing manner. The insert element (11) additionally encloses a retaining bracket (4) which elastically deforms the cable loop (2) and fixes it, at least essentially at right angles, in a clamping manner. This retaining bracket (4) is configured in the form of a U-profile and exhibits an abutment which clamps the inserted cable loop (2) in an angular manner and such that it can be detached. <IMAGE>
