Abstract (en)
[origin: EP0534580A1] A doctoring device (1) comprises a doctor device (10) with a profiled strip (2) having a doctor element (30). A part (21) of the profiled strip projecting beyond the working surface (4) is rigidly connected to a bearing part (6) which is arranged and mounted in the region of the pivot axis (30) of the doctor device in such a way that the doctor device (10) can be pressed against the working surface (4) only by magnetic force or weight without force-locking and positive-locking attachment to the doctoring device (1), a part (7) firmly connected to the profiled strip (2) being located with radial spacing (r) from the pivot axis (30) of the doctor device in loose engagement with a control part (8) which can be moved and fixed transversely to the extent of the doctor. <IMAGE>
