Abstract (en)  
[origin: US5244410A] The connection system permits an easy fixing of a flat cable (1) to a connector (20). The flat cable (1) has a central contact end (12A) terminating a conductive plate (12) and surrounded by an earth contact end (14A) extending an earth plate (14). The flat cable is coated with an insulant. These ends are fixed to the connector (20) by means of a potted cap (21), which is fitted by pressure. The position of the flat cable (1) can be of a random nature around the connector (20). Application to high voltage connections in a severe environment and to low voltage connections with or without shielding.
