Abstract (en)

[origin: WO9119887A1] A device for distributing oil in a camshaft of an internal combustion engine comprises a cylindrical insert (4) which extends axially in the camshaft (1) and which conveys two separate streams of oil in the camshaft (1). The insert (4) has a central oil (5) channel for an oil stream and a cavity (7) for a second oil stream which forms part of the device between the insert (4) and the camshaft (1). Both oil streams are conveyed to or from the camshaft in radial channels (15, 16).
