Abstract (en)  
[origin: EP0509543A1] 2. The circular loom according to the invention serves for producing tubular fabrics and has an annular frame with an upper ring plate (10) and a lower ring plate (12). Vertically movable healds (32) serve for guiding the warp yarns (36) and are mounted at a uniform distance from one another on at least one circular track (38). For mounting and guiding the healds (32), bearing bores (40) are made in the two ring plates (10,12). The healds (32) have, at their lower ends, cam-follower rollers (42) which run on an associated control disk (44). <IMAGE>
