Abstract (en)

[origin: WO9218941A1] Representation enabling the easy optical correlation of two signals, said representation being characterized in that, after selecting an elementary family of small waves, the module, the phase, the real or imaginary part of the transform are represented in small waves for one signal and of the transform in small waves for the other signal, both transforms being transposed side by side.

Abstract (fr)

Représentation permettant la corrélation optique aisée de deux signaux caractérisée en ce que, après avoir choisi une famille d'ondelettes élémentaire, l'on représente le module, la phase, la partie réelle ou imaginaire de la transformée en ondelettes de l'un et de la transformée en ondelettes de l'autre, transposée, côte à côte.
