Abstract (en)  
[origin: WO9200901A1] A container particularly suited for the storage of granular plastic raw material. The container has an octagonal or cylindrical shell section (1) that advantageously surrounds a plastic bag (9). The shell section (1) consists of liners and fluting cardboard layers placed between them. The top edge of the shell section (1) is provided with a flexible brimming edge (8) made of one of the liners, the said brimming edge making it possible to fill the container to the brim, but when the container is closed and pressures act upon the lid (7) of the container following the compacting of the granular material in the plastic bag (9), the brimming edge (8) crumples.
