Abstract (en)  
[origin: WO9214437A1] A disposable nurser (10) comprising a flexible bottle (20) that is removably inserted within a bottle holder (18) so that the open end (34) of the flexible bottle (20) is folded over the top edge and down the exterior sides of the bottle holder (18). A counter cap (16) comprising a sleeve is slidably mounted around the bottle holder (18) and is slid upward from the bottom of the bottle holder (18), over the open ends of the flexible bottle, and upward until it engages a stop means that prevents the counter cap (16) from moving further. A nipple holding cap (14) having a nipple (12) inserted therein is removably attached to the counter cap (16) so that the nipple (12) is sealingly connected in fluid flow relationship with the flexible bottle (20).
