Abstract (en)

[origin: EP0536613A1] The present invention relates to a plastic pail with an adapted lid, consisting of a pail or container which has an outwardly projecting collar (5) and a centring shoulder (4) thereon, a pressure flange (2), and a sealing lip (3) which points axially away from the pail opening, and has a lid (20) with an outer centring web (26) and a sealing groove (23) which is formed by the outer web (25), top flange (24) and inner web (22). The collar (5) forms a protected space (6) with the pail wall (1), as a result of which the sealing lip (3) and the centring shoulder (4) are concealed in a protected manner when pails are nested. The collar (5) is constructed in the manner of a hollow cylinder or as a closed cylinder with a completely or partially circumferential identical height and has a diameter identical to that of the centring web (26) of the lid (2) in the closed state and, with the latter, forms a common outer cylindrical surface (X). The centring web (26) surrounds the sealing groove (23) in a protective manner with the outer web (25), the top flange (24) and the inner web (22). <IMAGE>
