Abstract (en)
[origin: EP0536621A1] In a dishwasher, whose washing container (10) is connected via an aperture to an outside condensation chamber (12), further improvement of the drying operation is achieved in that the U-shaped condensation chamber (12) runs above the top (10a) of the washing container (10), in that its two limbs (12a, b) are inclined to the top (10a), and in that the region of curvature is connected to an outlet aperture (12e) via which the condensation occurring can flow back into the washing container (10). <IMAGE>
