Abstract (en)
An electrically operated locking system for doors and the like has an electrically operated locking device (14) installed inside the door (12). A control device (16) installed outside the door is operatively connected with the locking device (14). A light activated sensor (18) detects the position of the door (12) with respect to the door mounting, and is electrically coupled to the locking device (14) is activatable to operate the locking unit. When light is sensed, however, the locking device (14) is nonactivatable. <IMAGE>
