Abstract (en)
[origin: WO9201114A1] A method and apparatus for manufacturing multilayer filter paper on an inclined wire former. The former is provided with a forming wire having an inclined wire portion and a substantially horizontal wire portion. Stock is delivered to the former from a multichannel headbox in which the flow channels are arranged one above the other in such a way that the upper wall of one channel forms the lower wall of the flow channel above it, the flow channels leading to subsequent forming zones in each of which a layer of fibers superimposed on the layer formed in the preceding forming zone, is to be formed. The means for supplying stock to the headbox comprises a conduit and valve system by means of which stock from any one of the stock chests can be delivered to any one of the flow channels of the headbox.
