Abstract (en)
[origin: WO9200763A1] Novel immunoreactive compounds are provided which comprise one or more antigen-binding fragments of IgM or IgA coupled to a carrier molecule, such as HSA, an enzyme or a synthetic polypeptide of low immunogenicity. By coupling these fragments to the carrier their relatively low antigen affinity is restored to a level comparable with the affinity level of native IgM or IgA.

Abstract (fr)
On décrit des nouveaux composés immunoréactifs comprenant un ou plusieurs fragments de fixation de l'antigène de l'IgM ou l'IgA couplés à une molécule vectrice, telle que la sérumalbumine humaine (SAH), une enzyme ou un polypeptide synthétique de faible immunogénicité. Le couplage de ces fragments au vecteur permet de ramener leur relativement faible affinité aux antigènes à un niveau comparable au niveau d'affinité de l'IgM ou de l'IgA natif.
