Abstract (en)

The apparatus provides a method and apparatus for producing a personalised clothing pattern at the point of sale without requiring a large stock of predetermined pattern sizes. The apparatus comprises measuring means 12 for measuring at least the bust/chest, waist and hips of the person to whom the garment is being fitted, inputting 14 said measurements into correlating means 18 in which the measurements taken are compared to predetermined size values comprising inner and outer reference points for each garment pattern, noting the differences between said measured values and the inner and outer reference values and producing a personalised pattern using said variations and printing same on printing and/or plotting means 26 at the point of sale. Preferably the correlation means 18 includes storage means 20 having a selection of various pattern styles which can be provided to the correlation means 22. The printing/plotting means 26 may also include folding and/or cutting means to package the pattern ready for use. <IMAGE>
