Abstract (en)
A cylinder lock includes a cylindrical casing (1) having a stepped part (13) formed on an inner circumferential surface thereof, and a key rotor (2) formed of a synthetic resin material, rotatably inserted and set in place in the casing (1) and having an elastic engaging part (3) integrally formed on an outer circumferential part thereof. The elastic engaging part (3) is engageable with the stepped part (13) of the casing (1) to prevent the key rotor (2) from accidentally slipping off the casing (1). <IMAGE>
