Abstract (en)

A hydraulic actuator includes a single hydraulic cylinder device having a reciprocally movable piston, first and second working devices connected to opposite ends of the piston, and a stationary support which supports the first and second working devices. Each of said first and second working devices is provided with a working member and a linkage which is provided between the stationary support and the working member and which is connected to the piston to reciprocally move the working member in a predetermined direction in accordance with the reciprocal movement of the piston. <IMAGE>
