Abstract (en)

[origin: EP0537652A1] A description is given of a rosette (1) for covering a wall connection of a mixer unit (4) with a covering hood (2) which is arranged, by means of its through-bore, on a sleeve (3), which can be pushed over the sleeve nut (41) of the wall connection, and which can be axially adjusted by means of a thread. In order to improve said rosette, it is proposed that one or more longitudinal ribs (32), which bear in the insertion position on edge faces (42) of the sleeve nut (41), be integrally formed in an opening (31) of the sleeve (3), the covering hood (2) and the sleeve (3) being manufactured from plastic in an injection-moulding process, and a seal (21) being arranged in order to seal at least that end side of the covering hood (2) facing the building wall (5). <IMAGE>
