Abstract (en)

[origin: EP0538083A1] Device with a stabilising band (2) fastened to the rear of the body (1) of a bomblet. <??>The device comprises a first band loop (3) of relatively large longitudinal dimension and a second band loop (4) of relatively small longitudinal dimension, the two loops being fastened to the same point of the rear of the body (1) and being integral with one another in terms of rotation. <??>The invention is used for improving the deployment of the stabilising band, carried out in two stages, and improving the braking and aerodynamic stabilisation of a bomblet. <IMAGE>
