Abstract (en)
Each rib (2) of the support (1) made of a ribbed steel sheet contains a rigid member (6) for acoustic absorption which covers laterally all the perforations in the flanks of the ribs and which is given an overall V-shaped cross-section by a central channel (7). Application to the roofing of noisy premises of high hygrometry. <IMAGE>

Abstract (fr)
Chaque nervure (2) du support (1) en tôle d'acier nervuré contient une barre rigide (6) d'absorption acoustique qui recouvre latéralement toutes les perforations des flancs des nervures et auxquelles une goulotte centrale (7) confère une section transversale en forme générale de V. Application à la couverture des locaux bruyants à forte hygrométrie. <IMAGE>
