Abstract (en)
[origin: WO9220646A1] The invention relates to organic chemistry and more especially to therapeutic chemistry. It concerns, in particular, novel quaternary ammonium salts of general formula (I), in which Hal is a halogen atom other than fluorine, R and R¹?, the same or different, are lower alkyl radicals, n is an integer between 2 and 16, Z is an alkenyl radical having up to 3 carbon atoms, a carboxyl or represents the OR²? group in which R²? is hydrogen, a lower alkyl radical, an acyl residue, a tocol radical, a sterol radical or a carboxamide chain and A is a hydroxyl or a mineral or organic acid anion. The compounds according to the invention are the active ingredients in anti-tumoral and/or immunosuppressant pharmaceutical compositions.

Abstract (fr)
L'invention se rapporte au domaine de la chimie organique et plus particulièrement à celui de la chimie thérapeutique. Elle concerne plus particulièrement de nouveaux sels d'ammonium quaternaire de formule générale (I), dans laquelle Hal est un atome d'halogène autre que le fluor, R et R¹, identiques ou différents, sont des radicaux alcyle inférieur, n est un nombre entier variant de 2 à 16, Z est un radical alcényle ayant jusqu'à 3 atomes de carbone, un carboxyle ou le groupe OR² dans lequel R² est de l'hydrogène, un radical alcoyle inférieur, un reste acyle, un radical tocol, un radical stérolique ou une chaîne carboxamide et A est un hydroxyle ou l'anion d'un acide minéral ou organique. Les composés selon l'invention sont les principes actifs de compositions pharmaceutiques à action anti-tumorale et/ou immunosuppressive.
