Abstract (en)

[origin: US5295282A] In a mounting plate (10) configured as a wing plate for the adjustable mounting of the supporting arm of a furniture hinge, height adjustment is brought about by the fact that the mounting plate is divided into a bottom part (12) which can be affixed to the surface of the cabinet wall and a top part (14) which is displaceable in the direction of height on the bottom part and can be fixed at selected levels. In the mounting plate (10) one of the wings (20) is formed on the bottom part (12) and the other wing (18) on the top part (14), the bottom part reaching into an opening in the bottom of the wing (18) of the top part (14) and thus assuring guidance of the top part (14) on the bottom part (12) in the adjusting procedure.
