Abstract (en)

[origin: EP0413106A1] An accessory (1) for vehicles, such as bicycles, prams etc. is shown, having a simplified mount. The mounting consists of a form-fitting lock, the accessory being initially simply suspended from the luggage rack, for example of the bicycle or on a closing element (5) on the bicycle, and then locked. The locking takes place in a form-fitting manner with a bolt (12) which engages behind a locking pin (10). <??>In order to remove the accessory, locking takes place independently of the actual removal process, in advance by actuating a handle (11) which pulls back the bolt (12). <??>A preferred embodiment provides for a closing element (5) to be arranged on the bicycle and an adaptor (4) to be arranged on a bicycle bag (1) and to insert said bicycle bag (1) initially with an axis (7) into an open joint (6) when mounting the bicycle bag (1) and to lock it at a distance from the axis (7) by pivoting said bag about said axis. The bicycle bag is clamped by a wire hook manufactured from one piece by bending. The closing piece (5) is additionally secured against pivoting about the handlebars (2) by a wire cable (44). The wire cable (44) is pulled over the handlebars (2) and under the front part of the vehicle (76). <IMAGE>

[origin: EP0413106A1] The removable accessory (1) for bicycles, perambulators etc. is secured to the bicycle etc. by a locking bolt (12) movable by a handle (11) between a free (13) and an engaged position (14). It pref. has a stiffener at the fastening point to the bicycle, which is in integral with the rigid handle and incorporates engaging hooks.
