Abstract (en)

[origin: EP0539097A1] The present invention is a low-contamination impact tool especially useful for the breaking of semiconductor-grade silicon into pieces. The low-contamination impact tool comprises a core forming a handle portion (1) and a head portion (2), the head portion (2) contacting a tungsten carbide alloy striking element (4). The core is encapsulated in a synthetic resin material (3). The preferred synthetic resin is urethane.
