Abstract (en)
[origin: EP0539318A1] A support frame 1 for an elevator chair 2 comprises a ground engaging base frame 10, 11, 12, 13 and side supports 20, 21 to which a seat portion 3 of the chair 2 is mounted. Upper and lower linkage arms 30, 31, 40, 41 extend between the base frame 10, 11, 12, 13 and the side supports 20, 21. The linkage is operated by a ram 6 to raise the seat portion 3 of the chair 2 to assist a user in exiting from the chair. A pair of rear castors 50, 51 and a pair of front castors 60, 61 are provided. When a user is resting on the chair the castors 50, 51, 60, 61 engage the ground. When a user operates the ram 6 the front castors 60, 61 are raised and the chair is supported on front ground engaging legs which prevent the chair from moving as a user is exiting from the chair. <IMAGE>
