Abstract (en)

[origin: EP0539799A2] The invention relates to community receiving systems with modules, which can be modularly and operationally connected to one another, with satellite-IF inputs and outputs. Each module has in each case one input and in each case at least one output for the terrestrial frequency band. In each case a terrestrial output of the in each case one module can be connected to the terrestrial input of the in each case adjacent module.
