Abstract (en)

[origin: EP0453806A1] What is described is an installation for stacking units comprising separate slabs or packs of slabs. It has a multiplicity of stacking stations lying one behind the other in a row, above which a transporting device is arranged. This has two or more stacking carriages which are guided along an endless guide track and to which is allocated a stacking device. <?>The stacking carriages (20) are equipped with units in a feeding station and then fed to predetermined stacking stations (I to VII) in accordance with a work programme, and there are deposited in the respective stacking stations, by means of a stacking device (26), the stacking carriages (20) running continuously through the respective stacking stations. <IMAGE>

[origin: EP0453806A1] The stacker for stacking single plate-shaped workpieces or packs of plates consists of a number of stacking units in a row behind each other. Above the stacking units is a conveyor (18) which has at least two stacking-carriages (20) running along a continuous horizontal or vertical guide-track. The single shapes transferred to the stacking carriages (20) are deposited by distributors dropping according to a distribution programme from a store of plates into a stacking unit (I,VII).
