Abstract (en)
[origin: EP0540780A1] In the case if a sealing insert of elastomeric material which can be anchored by casting in a pipe socket (10), mobility and mechanical protection of a cylindrical first sealing lip (5), pointing towards the socket collar, of a double sealing lip which can be swivelled upon introduction of a spigot end (16) is effected by an additional coaxial protective sleeve, which is formed on the sealing insert between the sealing lip and the inner wall of the socket, and runs out in an inner flange, which engages radially over the axially outer-lying edge of the sealing lip.
